

1. データ引用

例. 患者の身長を自動引用する。

variableで変数を設定し、initialExpressionで取得・評価して、フォームに初期表示させる。

Questionnaire.extension:variable

```
...
"extension": [
  {
    "url": "http://hl7.org/fhir/StructureDefinition/variable",
    "valueExpression": {
      "name": "height",
      "language": "text/fhirpath",
      "expression": "Observation.where(code.coding.code = '31000298').valueQuantity.value"
    }
  },
  ...
]
...
```

nameに一意の変数名を記載

引用したい値を示す
FHIR Pathを記載

Expression.name (Type id)

id Any combination of upper- or lower-case ASCII letters ('A'..'Z', and 'a'..'z', numerals ('0'..'9'), '-' and '.', with a length limit of 64 characters. (This might be an integer, an un-prefixed OID, UUID or any other identifier pattern that meets these constraints.)

Regex: `[A-Za-z0-9\-\.\.]{1,64}`

1. データ引用

item.extension:initialExpression

```
...
  "item": [
    {
      "extension": [
        {
          "url": "http://hl7.org/fhir/StructureDefinition/questionnaire-unit",
          "valueCoding": {
            "system": "http://unitsofmeasure.org",
            "version": "4.0.1",
            "code": "cm",
            "display": "cm"
          }
        },
        {
          "url": "http://hl7.org/fhir/uv/sdc/StructureDefinition/sdc-questionnaire-initialExpression",
          "valueExpression": {
            "language": "text/fhirpath",
            "expression": "%height"
          }
        }
      ],
      "linkId": "RegistrationHeight",
      "definition": "http://hl7.org/fhir/StructureDefinition/bodyheight#Observation.value[x]:valueQuantity.value",
      "text": "身長(cm)",
      "type": "decimal"
    }
  ]
  ...

```

variableにて設定した変数名を記載

FHIR Pathに非対応のベンダはAP側でこの変数名を各社の引用文字列(SQL等)に変換して利用する想定
